

# Windows Autopilot

Windows Autopilot simplifies the way Lenovo devices are deployed, reset and re-purposed, with an experience that is zero-touch for IT. *Users will love it.*

Lenovo

## Why Windows Autopilot?

### Out of the box and ready to go

Unbox and turn on your Lenovo device  
Windows Autopilot configures it from the cloud in a few steps

### Keep track of the whole process

Windows Autopilot shows users how their configuration is progressing

### Provisioning minus the hassle

Deliver a better user experience with personalisation and a simple setup

### Move to the cloud at your own pace

Connect devices deployed with Windows Autopilot to Azure Active Directory and Intune mobile device management

## How it Works

With Windows Autopilot, there's no need to re-image or manually set up new Lenovo devices before handing them out to your users. Getech can ship them, ready to go, straight to your employees

### Device registration

Getech will automatically add the new devices to the Windows Autopilot deployment service for you

### Profile creation and assignment

Customise set up and config by creating a profile to assign to your organisation's devices

### Shipping

Getech ships the devices to the users  
Turn on, go online and Autopilot delivers apps and settings

Contact the team at [educ@getech.co.uk](mailto:educ@getech.co.uk) for more information on how we can use Education Campus licensing with Autopilot

## Features

Windows Autopilot provides setup and pre-configuration services for new devices ensuring they are ready to use with no IT involvement

### Support for existing devices

Deploy the latest version of Windows to existing devices with apps installed and profiles synced so users can resume work right away

### White glove

Getech can pre-provision Lenovo devices to be fully configured and business-ready for institutions and users

### User-driven mode

Make it easy for end-users to set up new Lenovo devices, without any IT involvement, using Windows Autopilot

### Self-deploying mode

Deploy Windows to a kiosk, digital sign or shared device, with little or no interaction

### Windows Autopilot reset

Remove personal files, apps and settings or reapply the device's original settings, all while maintaining its identity in Azure AD Perfect for re-purposing the for the next user

### Enrolment status page

Ensure devices are fully configured, compliant and secure before users can access the desktop
