

# ACCELERATE YOUR JOURNEY TO SUSTAINABLE IT WITH IGEL

Enterprise IT is responsible for about **2.5%** of all global greenhouse emissions

End user computing alone produces CO<sub>2</sub> emissions equivalent to driving **10 million cars 100,000 miles year.**

That's equal to 12 trips to Mars and back!

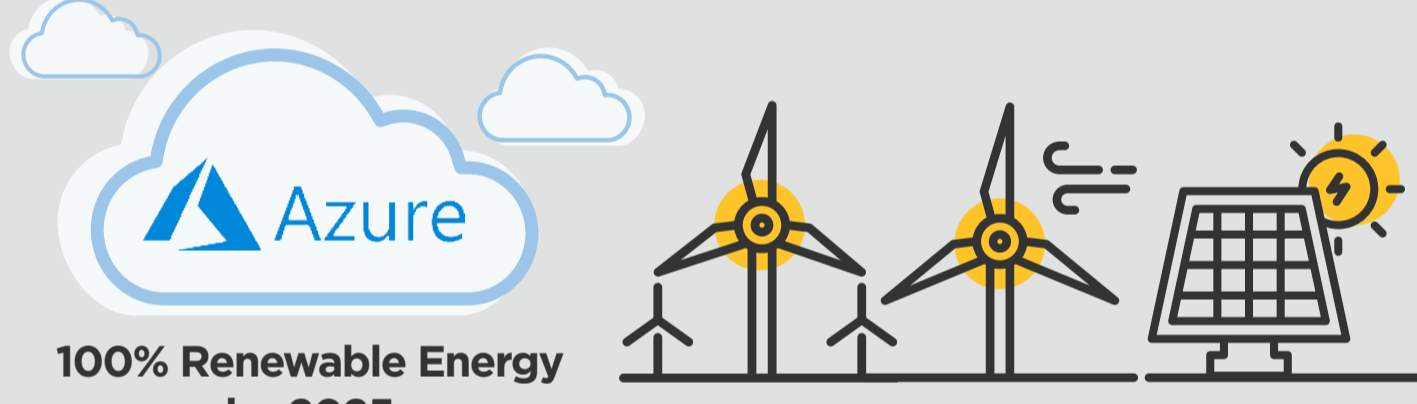

Offsetting these emissions naturally would require a dense forest over **20%** the size of the United States

But there are more practical steps that IT leaders can take today

Shift compute power to carbon-neutral cloud environments

100% Renewable Energy by 2025

Virtual desktops consolidate end user computing resources into shared infrastructure that is easier to power sustainably.

Extend the lifespan of existing endpoint devices

Extending the useful life of PCs by converting them to IGEL OS unlocks more value from the same manufacturing footprint.

Even doing this at one medium-sized business makes a significant impact.

Make sustainability a key device buying criteria

When PCs do eventually need to be replaced, IGEL makes it possible to use endpoints with a much smaller environmental footprint.

Enable and Promote Remote Work to Reduce Emissions

Along with increasing employee satisfaction and productivity, working from home options reduce carbon emissions by decreasing the number of daily commuters on the road. IGEL makes remote work simpler and more secure.

Use employee-owned devices securely with UD Pocket

Manage endpoints and support users remotely with IGEL Universal Management Suite

## Accelerate your transition to sustainable IT with IGEL

IGEL is the simple, smart, and secure way to reduce your organization's environmental footprint while increasing user productivity and satisfaction.
